

Q1. Dynamic Greeting

Create a route `/greet/<name>` which passes the name to a template and displays:
Hello `<name>`, welcome to Flask!

Q2. Mini Calculator

Make a Flask app with a route `/calc/<int:a>/<int:b>` that shows results of addition, subtraction, multiplication, and division inside an HTML page.

Example: `/calc/10/5` → displays:

`10 + 5 = 15`

`10 - 5 = 5`

`10 * 5 = 50`

`10 / 5 = 2.0`

Q3. CSS Styling

Add a `style.css` file inside `static/` that changes background color and centers text.
Use it inside a template (via `<link rel='stylesheet'>`).

Q4. Template Inheritance

Create a `base.html` with a navbar and footer.
Extend it into two pages: `home.html` and `contact.html`.
Each page should replace only the content block.

Q5. Form Handling

Make a route `/feedback` that:

- Shows an HTML form (name + message)
- On submit → returns a page displaying 'Thank you `<name>` for your feedback: `<message>`'.

Q6. Static + Template Combo

Create a page `portfolio.html` that:

- Uses `render_template`
- Loads your profile image from `static/`
- Displays a small bio text (written inside template).

Q7. Student Management

Create a `students` table with fields: `id`, `name`, `email`, `course`.

- Build routes to **Add, Show, Update, and Delete students**.
- Display all students in a table with Edit/Delete buttons.

Q8. Library Management

Design two tables:

- `books` (`book_id`, `title`, `author`, `available_copies`)
 - `members` (`member_id`, `name`, `email`)
- Tasks:
- Add new books and members.
 - Show list of books and members separately.
 - Update book availability when a member borrows/returns a book.

Q9. Blog Application

Two tables:

- `users` (`user_id`, `username`, `email`)
 - `posts` (`post_id`, `title`, `content`, `user_id` as foreign key)
- Tasks:
- Create a new user.
 - Add posts linked to a user.
 - Show all posts with their author's name (JOIN).
 - Update or delete posts.

Q10. Event Planner

Two tables:

- `events` (`event_id`, `name`, `date`, `location`)
 - `participants` (`participant_id`, `name`, `event_id` as foreign key)
- Tasks:
- Add new events.
 - Register participants under an event.
 - Show event details along with its participants.
 - Allow updating/deleting events and participants.

Q11. E-Commerce (Mini Version)

Tables:

- `products` (`product_id`, `name`, `price`, `stock`)
 - `orders` (`order_id`, `customer_name`, `product_id`, `qty`)
- Tasks:
- Add new products.
 - Place orders (reduce product stock).
 - Show order history with product details (JOIN).
 - Update/Delete products or orders.
